1. **Introduction**

Government of Malawi has developed the National Climate Change Management Policy to address the adverse impacts of climate change. An Implementation, Monitoring and Evaluation Strategy (IMES) has been developed to ensure that the Policy is fully and effectively implemented.

This IMES provides an Implementation Plan which highlights the institutions responsible for implementation of activities within a specified time frame. The Strategy also provides a Monitoring and Evaluation Plan which outlines the expected outputs, performance indicators of those outputs, the targets to be met, baseline information, means of verification of meeting the targets and assumptions and risks that may be faced. This IMES is not a stand-alone document; it needs to be read along with the National Climate Change Management Policy for further understanding.

2. **Strategies for Policy priority Areas**

The National Climate Change Management Policy has listed six priority areas: (1) Adaptation; (2) Mitigation; (3) Capacity Building Training and Awareness; (4) Research, Technology Development and Transfer, and Systematic Observation; (5) Financing; and (6) Cross cutting issues namely Population, Gender and Disadvantaged Groups, and HIV and AIDS.

2.1 **Policy Priority Area 1: Climate Change Adaptation**

**Objective 1:** To ensure that the nation is able to adjust to changes as a result of climate change.

**Strategies:**

**Policy and Legal framework:**

1. Facilitate the integration of climate change into sectoral policies, programmes and planning systems at national and district levels through revising and updating sectoral legislations, policies and planning documents;
2. Ensure that major developmental strategies and frameworks such as the MGDS continue to include climate change as a priority;

3. Ensure that social protection policies and disaster-response strategies and actions take into account medium and long term coping and adaptation measures in disaster prone areas.

Agriculture:
1. Integrate agriculture into climate-resilient rural development planning to address the promotion, up-scaling and adoption of climate smart agriculture with a particular emphasis on building climate resilience through leveraging synergies between adaptation and mitigation;

2. Promote adaptation in such a manner as to enhance incorporation of agro-forestry, land use planning and soil and water conservation in order to attain food security, livelihoods and natural resource resilience.

Water:
3. Promote water retention technologies such as rain water harvesting and reduce over-abstraction of water from rivers and lakes (by supporting existing legislation on water resources management and irrigation).

Health:
4. Put in place strategies to integrate climate change into the Health sector;

5. Improve national awareness on health risks associated with changes in climate and weather variability;

6. Strengthen awareness programmes on cholera, malaria and other diseases that are directly or indirectly linked to climate change.
Human Settlements:

7. Improve zoning and planning to reduce vulnerability of people by ensuring that settlements and infrastructure are not built on sensitive and disaster prone areas (by supporting existing land resources and physical planning legislations);
8. Promote the development of a human settlement policy to optimize land use and build resilience to climate related disaster risks.

Energy:

9. Adopt a climate compatible development approach when planning for energy infrastructure needs and aim for low carbon solutions including reducing overdependence on biomass based energy;
10. Promote the local manufacture, establishment and access to renewable energy technologies.

Forestry:

11. Improve the livelihoods of local communities through the sustainable provision of forest goods and services and development of forest-based enterprises.

Biodiversity:

12. Conserve, rehabilitate and restore ecosystems as a means to provide resilience to climate change impacts;

Fisheries:

14. Promote systematic and consistent data and information collection and dissemination for sound and effective knowledge management to inform and support early warning systems in the Fisheries sector.
Objective 2: To develop adaptation responses that will address short, medium and long term development goals.

Strategies:

Agriculture:
1. Based on scientific evidence through vulnerability studies and assessments, develop short and long term adaptation scenarios to identify climate resilient land uses and promote climate smart agriculture.

Water:
2. Employ an ecosystems approach to managing water resources and their catchments;
3. Enhance irrigation through climate compatible water resources and climate proofed infrastructure.

Health:
4. Promote more research in eco-health issues and impacts of climate change on health such as the development of integrated health, social and environmental impact assessments.

Human Settlements:
5. Improve infrastructure and ensure climate proofing of infrastructure and human settlements.

Energy:
6. Provide fiscal incentives to increase access to renewable energy technologies.

Forestry:
7. Reduce dependence on fuel wood by promoting alternatives that would substantially shift the majority of Malawians up the energy ladder.
Biodiversity:
8. Include biodiversity issues in climate adaptation programmes, projects and plans.

Fisheries:
9. Promote aquaculture to supplement production in capture fisheries;
10. Promote technologies that enhance fisheries production in both capture and aquaculture while improving post-harvest processing and value addition.

Objective 3: To ensure that adaptation interventions are local and autonomous and will promote conservation of natural resources, improvement of food security and rural livelihoods, creation of green jobs and address other challenges such as rural-urban migration.

Strategies:

Agriculture:
1. Develop mechanisms that will utilize early warning systems on adverse weather, pests and diseases occurrence, which will also provide up-to-date information and decision support tools to assess the vulnerability of farmers and inform farm management decisions;
2. Prevent land degradation and deforestation, and address the issues of bush fires.

Water:
3. Promote good catchment management to reduce siltation and pollution of Malawi’s waters.

Health:
4. Recognize that the nutritional status of individuals is key to building resilience to environmental health threats, and ensure that food security and good nutritional policies form part of an integrated approach to health adaptation strategies (by supporting existing health legislation);
5. Harmonize data collection to improve linkages among all Departments affected by climate change such as Energy, Forestry, Water, Agriculture, Disaster Risk Reduction and Health.

**Human Settlements:**
6. Provide incentives for environmental friendly building technologies;
7. Oblige cities and municipalities to dispose of solid waste in proper sanitary landfills and where possible linked to carbon markets;
8. Promote the concept of green cities.

**Energy:**
9. Encouraging afforestation activities and non-extractive livelihoods from forests, which will also improve catchments for hydropower generation.

**Forestry:**
10. Implementation of legislation aimed at decelerating deforestation and curbing bush fires.

**Biodiversity:**
11. Promotion of the sound management of ecosystems integrating biodiversity in national and sectoral adaptation programmes, projects and plans.

**Fisheries:**
12. Promote protection of water resources and good catchment management to allow ecosystems services such as water retention improvement in soils and regulating flow in rivers as they affect fisheries sector;
13. Promote a harmonized and ecosystems approach in water resources management.
2.2 Policy Priority Area 2: Climate Change Mitigation

Objective 1: To promote good land use practices including climate smart agriculture and conservation agriculture.

Strategies:

Forestry Management and REDD+:
1. Promotion of vegetation and tree cover through relevant sectoral policies.

Agriculture:
2. Increase of below ground carbon storage;
3. Development of Nationally Appropriate Mitigation Actions, taking into account that emissions from land-based sectors are the largest source of emissions in the country;
4. Increase of above ground carbon storage through promotion of agro forestry.

Objective 2: To promote adoption and access to renewable and cleaner energy technologies.

Strategies:

Energy:
1. Promotion of energy saving technologies and practices to decrease pressure on the forest reserves for provision of firewood and improve health through reduced indoor air pollution;
2. Engaging the transport sector including manufacturers, distributors, and users in the development, production, marketing and distribution of biofuels including ethanol;
3. Promotion of renewable energy and other low carbon energy alternatives through fiscal incentives and other means.
Industrial Sector:
4. Engaging the industrial sector in the development, production, marketing and distribution of biofuels including ethanol.

Transport sector:
5. Promote use of biofuels including ethanol.

Housing and Infrastructure Development:
6. Promotion of cleaner and efficient energy technologies.

Objective 3: To promote implementation of REDD+, Clean Development Mechanism, carbon emission trading schemes and other Payment for Ecosystem Services (PES) schemes in both public and private sectors.

Strategies:

Industrial sector:
1. Promote technologies for carbon capture and storage, recycling and reuse of waste as raw materials.

Waste Management:
2. Promotion of construction and use of environmental friendly sanitary landfills.

Clean Development Mechanism/ Market Mechanisms:
3. Promotion of implementation of CDM projects;
4. Support capacity enhancement for CDM including development of guidelines;
5. Raise awareness on CDM approaches and practices.
Forestry Management and REDD+:

6. Promotion of REDD+ as a strategy for mitigation, to ensure continuous forest cover for carbon storage, maintenance of biodiversity, protection of watersheds, and prevention of soil erosion (in support of REDD+ strategy and existing forestry legislations).

Objective 4: To improve integrated waste management practices.

Strategies:
1. Promote the development of Policy and institutional structure for integrated waste management framework of low carbon emissions;
2. Promote the adoption of practices and technologies for waste reduction, reuse, recycle, retrieval and disposal;
3. Promote reduction, reuse, recycling, retrieval and disposal of waste;
4. Promote Private Public Partnerships in waste management;
5. Enhance data collection, analysis and monitoring of emissions arising from burning of domestic waste in high density and informal settlements to reduce GHGs and improve health.

Objective 5: To establish an enabling environment as well as policy and legal framework for guiding the governance of CDM, REDD+, PES and emerging new market mechanisms.

Strategies:

Industrial sector:
1. Promote principles of green economy and low emissions development strategies/approaches.
Forestry Management and REDD+:
2. Enforce policy/legislation and improve infrastructure for arresting deforestation and bushfires.

Transport sector:
3. Promotion of strategies and approaches that would reduce vehicular emissions;
4. Enhance data collection, analysis and monitoring of emissions from transport sector to reduce GHG emissions and improve public health;
5. Enact and enforce vehicle emissions standards.

2.3 Policy Priority Area 3: Capacity Building, Education, Training and Awareness

Objective 1: To build capacity on climate change through formal, non-formal and informal systems.

Strategies:
1. Engage formal, informal and non-formal institutions to integrate climate change through curriculum review and advocacy materials.

Objective 2: To strengthen the capacity of relevant institutions to deliver climate change education and training.

Strategies:
1. Promote collaboration, targeted training and sensitization for specialized sectors and key actors in climate change.
Objective 3: To improve knowledge sharing among key sectors and the general public on climate change.

Strategies:
   1. Promote collaboration among sectors on prioritization of climate related sectoral interventions;
   2. Promote short and long term planning through modeling and scenario building.

2.4 Policy Priority Area 4: Research, Technology Development and Transfer, and Systematic Observation

Objective 1: To promote knowledge management through improved data collection, analysis and application for evidence informed adaptation and mitigation.

Strategy:
   1. Encourage acquisition, maintenance and servicing of weather and environmental friendly technologies to support evidence-based decision making in mitigation and adaptation, including early warning.

Objective 2: To promote application of research, science and technology to support climate compatible development including climate proofing.

Strategy:
   1. Promote application of research and technology advancement for climate change adaptation and mitigation based on relevant needs assessment and state of science and technology reports.

Objective 3: To develop and manage cleaner technology transfer, adoption and adaptation.

Strategy:
   1. Support technology transfer and innovation to enhance low carbon growth in both public and private sector.
Objective 4: To promote research, research innovation and technological innovation for mitigation and adaptation.

Strategy:
1. Promote access to research grants for centers of excellence to undertake research in climate change adaptation and mitigation, including indigenous knowledge.

2.5 Policy Priority Area 5: Climate Change Financing

Objective 1: To increase budgetary allocation for climate change management interventions, improve access and management of international finance and funding.

Strategies:
1. Proactively support government, non-governmental and private sector institutions seeking multilateral and bilateral resources and financing for enhanced climate change adaptation, mitigation, technology transfer and capacity building;
2. Integrate fiscal mechanisms on externalities that contribute to climate change and ensure that funds accrued are channeled to climate change management activities;

Objective 2: To provide incentives to encourage private sector investment.

Strategy:
1. Incentivize private sector growth through investment in climate change management.
Objective 3: To assess and address barriers that limit access and efficient absorption of international climate financing.

Strategy:
1. Create an enabling environment and capacity enhancement for financial resource mobilization towards implementation of climate change activities and technology acquisition.

2.6 Policy Priority Area 6: Cross-Cutting Issues

2.6.1 Legislation

Objective 1: To ensure that sectoral policies and planning documents/strategies including population and gender take into account climate change management.

Strategies:
1. Facilitate integration of climate change into sectoral policies and planning systems at national and district levels;
2. Ensure that major developmental strategies such as the MGDS will continue to include climate change as a priority within priorities;
3. Ensure that social protection policies and disaster-response strategies and actions take into account medium and long term coping and adaptation measures in disaster prone areas.
2.6.2 Population

Objective 1: To integrate population issues into climate change management programmes and projects.

Strategy:
1. Create awareness on the linkages between population and climate change;
2. Facilitate integration of climate change issues into policies that address population dynamics, reproductive health and family planning within the rights based approach framework.

Objective 2: To support community resilience to climate change adaptation and mitigation through enhanced family planning and reproductive health.

Strategy:
1. Inclusion of climate change in programmes targeting vulnerable groups including the girl child, youths, people living with HIV and the physically and mentally challenged.

Objective 3: To support rural and urban settlement planning to mitigate against climate related disasters.

Strategy:
1. Create an enabling environment for planned human settlements in rural and urban areas to reduce climate related disaster risks.
2.6.3 Gender and Disadvantaged groups

Objective 1: To include vulnerable and disadvantaged groups such as women, children, the elderly, and the physically and mentally challenged in adaptation, mitigation, technology transfer and capacity building plans, Projects and programmes.

Strategy:
1. Consideration of, and engagement with, disadvantaged groups when designing and implementing adaptation, mitigation, technology transfer and capacity building plans, projects and programmes;
2. Promotion of technologies that are amenable and culturally appropriate for use by vulnerable groups.

2.6.4 Private Sector and Community Participation

Objective 1: To promote private sector involvement through provision of incentives in climate compatible development and environment friendly production and consumption.

Strategy:
1. Promote participation of private sector to tap into climate change mitigation funds such as market mechanism to foster opportunities that safeguard investments.

Objective 2: To increase number of public–private partnerships for climate compatible development.

Strategy:
1. Provide incentives for public-private partnerships in clean development and new market mechanisms such as renewable energy technologies and eco-tourism.
Objective 3: To promote private sector participation in innovation and creation of green jobs and payment for ecosystem services schemes.

Strategy:
1. Provide platforms for dissemination of lessons learnt and experiences in implementing climate compatible programmes.

Objective 4: To promote community participation and involvement in climate compatible development by providing for adequate stakeholder consultation.

Strategy:
1. Ensure adequate stakeholder consultations in EIAs and climate compatible development by engaging communities in decision making.
3. IMPLEMENTATION PLAN

**Policy Priority Area 1: Climate Change Adaptation.**

**Policy Statement:** The Policy will reduce vulnerabilities of populations in Malawi and promote community and ecosystem resilience to the impacts of climate change, women, girls and vulnerable groups’ engagement and involvement in planning and implementation of climate change adaptation interventions thereby ensuring that communities are able to adapt to climate change by promoting climate compatible development.
